

ICSC Ambassador Motivation Letter

Dear Mr Victor Prado Both,

My name is Hamad Khalid Alabdolly, and I am a high school student from the United Arab Emirates with a strong passion for computer science, technology, cybersecurity, and software development. I am writing to apply for the ICSC Ambassador Program because I believe computer science has the power to inspire students, solve real-world problems, and shape the future.

My main motivation for becoming an ICSC Ambassador is to encourage more students in my region to discover the exciting world of programming and technology. Many students around me are interested in technology but do not know where to start. I want to help create a supportive environment where students can learn, collaborate, and build confidence in computer science.

I already have experience working on personal technical projects and educational ideas. I have developed and planned several projects related to productivity applications, educational platforms, Quran applications, AI-based systems, Telegram bots, and even a custom Linux distribution project called "UnionOS." Through these experiences, I learned problem-solving, self-learning, teamwork, leadership, and how to guide others in technology-related topics.

As an ICSC Ambassador, I plan to organize activities such as: Introducing students to programming and computational thinking. Creating local coding groups and online communities for students. Promoting ICSC through social media and school outreach. Hosting beginner-friendly workshops about programming, artificial intelligence, and cybersecurity. Helping students prepare for ICSC by sharing resources, practice problems, and guidance. I believe I can inspire students by making computer science more approachable and exciting. I want to show students that they do not need to be experts to start learning. With the right support and motivation, anyone can improve their skills and participate in competitions like ICSC.

I estimate that I can directly reach between 50 and 150 students through school communities, social media platforms, Telegram groups, and local student networks. Over time, I hope to expand this community further and encourage long-term engagement in computer science activities.

I would be honored to represent ICSC in the United Arab Emirates and contribute positively to the global ICSC community. Thank you for considering my application. I look forward to the opportunity to support and promote computer science education through ICSC.

Sincerely,

Hamad Khalid Alabdolly
United Arab Emirates
